Summary

Senior Software Engineer with 6+ years of experience designing, scaling, and deploying high-impact applications. Proven ability to lead large-scale projects, optimizing for performance and security in high-traffic environments. Experience in data management, user interface design, and efficient data processing makes me well-suited for managing camp registrations, ensuring accurate data input and high-quality customer service. Proficient in building and maintaining robust systems and handling sensitive data.

Technologies

Backend: Python, NodeJS, Golang, Java, Nginx, Typescript, GraphQL, Redis, Boto3, SQL

Frontend: Javascript, React, Redux, HTML, CSS, NodeJS

DevOps: AWS, Terraform, Git, Docker, Kubernetes, Ansible, CI/CD, Spinnaker, Jenkins

Databases: Postgres, MongoDB, DynamoDB, SQL, NoSQL

Experience

SENIOR SOFTWARE ENGINEER

Samsung formerly SmartThings

Mountain View

July 2021 - present

- Developed an Energy Monitoring Dashboard using React and Go, allowing users to track real-time power consumption of connected devices, leading to 12% average energy savings per household. This project showcased the ability to develop and deploy scalable applications with a direct impact on user experience. This involved data analysis, reporting, and user interface design, skills transferable to managing camp registration data.
- Designed and optimized a high-throughput caching layer using Redis and Memcached, reducing database load by 60% and improving API response times by 45% for latency-sensitive applications. This demonstrates experience in optimizing performance for large-scale systems, a skill applicable to efficient camp registration processes."
- Blocked malicious or unintentional traffic (45% Reduction) by implementing load shedding with Launch-Darkly and Nginx, preventing spam requests from degrading service performance. This highlights experience in building robust and resilient systems, crucial for handling high-volume camp registrations."
- Led a five-man team for an ISO audit. Worked cross-team with Boto3 and Terraform modules to assign VPCs to non-compliant Lambdas and lock down S3 buckets to achieve security clearance. This demonstrates experience in managing teams, ensuring data security and compliance—essential for protecting sensitive camper information."

BACKEND ENGINEER

iCIMS

San Jose

Jan 2019 - July 2021

- Led a three-person team to develop an AI-powered international job platform, integrating Google Maps API for location-based job matching and automated recruitment workflows. This innovation streamlined hiring for recruiters and secured a profitable deal with Circle K. This project showcases leadership and project management skills applicable to organizing and managing camp registrations efficiently."
- Developed high-performance REST APIs with JavaScript, Elasticsearch, and Java, enabling real-time candidate search in the TextRecruit app. This enhanced recruiter-candidate connections, boosting engagement by 38% and streamlined hiring. This demonstrates experience in building scalable and high-performance APIs and data management which translates well to a camp registration system."

SOFTWARE ENGINEER INTERN

Bot M.D. (Y Combinator S 18)

Palo Alto

July 2018 - August 2018

- Scraped thousands of articles on the web using python and utilized that data to populate our LLM to our Postgres DB. This project showcases experience with data scraping and integration with databases; skills relevant to managing and processing camp registration data.

Education

BACHELOR OF SCIENCE, COMPUTER SCIENCE

University of California, Irvine

Irvine, CA
